

按照匀速运动来实现运动的

$$\Delta S = S/n$$

每次. $\Delta t = t/n$

current Top
window. scrollY

target Top
 $ty = \text{div. offset Top}$

$ty - wy$ 要滚的距离

$$S = \text{target Top} - \text{current Top}$$

$$t = 500 \text{ ms}$$

$$n = 25 \text{ 次}$$

##用了tween这个库之后的时间的计算方法:

Branch: master New pull request

mikebolt Merge pull request #495 from tweenjs/mikebolt-patch-9

assets Crop and resize the aframe logo.

tween这个库可以让你不用匀速地让图动,可以按照某种规律地让图动！！

tween里面的动画的函数：

easings.net

Easing functions specify the rate of change of a parameter over time.

Objects in real life don't just start and stop instantly, and almost never move at a constant speed. When we open a drawer, we first move it quickly, and slow it down as it comes out. Drop something on the floor, and it will first accelerate downwards, and then bounce back up after hitting the floor. This page helps you choose the right easing function.
