数据结构的选择 写网站步骤 怎么自动生成标签 完整代码

数据结构的选择

1.哈希

因为每一个键都对应着一个网站的链接

i:对应着aiqiyi

q:qqzone

w:weibo

t:taobao.com

0: [q w e r t ... p]

1: [A s d f ...L]

2: [z x c ...m]

2.怎么把键盘存下来: 用数组;

写网站步骤

1.

```
<title>我的导航</title>
     </head>
     <body>
         <header></header>
         <main>
10
             <div>
11
                  <kbd>q</kbd>
12
                 <kbd>w</kbd>
13
                 <kbd>E</kbd>
14
15
                  <kbd>R</kbd>
                 <kbd>T</kbd>
                 <kbd>Y</kbd>
17
                 <kbd>U</kbd>
18
19
                  <kbd>I</kbd>
                  <kbd>0</kbd>
                  <kbd>P</kbd>
21
             </div>
22
             <div>
23
24
                  <kbd>A</kbd>
                 <kbd>S</kbd>
25
                 <kbd>D</kbd>
                  <kbd>F</kbd>
27
                  <kbd>G</kbd>
28
                 <kbd>H</kbd>
29
                  <kbd>J</kbd>
                 <kbd>K</kbd>
31
                 <kbd>L</kbd>
32
             </div>
33
             <div>
34
                  <kbd>Z</kbd>
35
                  <kbd>Z</kbd>
36
                 <kbd>G</kbd>
37
                  <kbd>H</kbd>
                 <kbd>J</kbd>
                  <kbd>K</kbd>
                  <kbd>L</kbd>
41
42
             </div>
43
44
         </main>
         <footer></footer>
45
```

q w E R T Y U I O P A S D F G H J K L Z Z G H J K L

怎么自动生成标签

这个可能需要用到正则表达式,等到以后可能再讲; 其实下面的第一行也可以写成第二行中括号的形式;

```
×
     o index.html ×
                        <kbd>U</kbd>
                        <kbd>I</kbd>
                        <kbd>0</kbd>
                        <kbd>P</kbd>
                    </div>
                        <kbd>A</kbd>
                        <kbd>S</kbd>
                        <kbd>D</kbd>
                        <kbd>G</kbd>
                        <kbd>H</kbd>
                        <kbd>J</kbd>
                        <kbd>K</kbd>
                        <kbd>L</kbd>
                        <kbd>Z</kbd>
                        <kbd>Z</kbd>
                        <kbd>G</kbd>
                        <kbd>H</kbd>
                        <kbd>J</kbd>
                        <kbd>K</kbd>
                        <kbd>L</kbd>
                </main>
                var keys ={
                    0:{0:'q',1:'w',2:'e',3:'r',4:'t',5:'y',6:'u',7:'i',8:'o',9:'p'},
       48
                    1:['a','s','d','f','g','h','j','k','l'],
                    2:['z','x','c','v','b','n','m'],
                    length:3
```

这其实就是一个数组嵌套:

外面是一个0,1,2的这样一个长度为3的数组;

这长度为3的数组里面第一个为长度为10的数组;

第二个为长度为9的数组;

第三个为长度为7的数组;

数组里面嵌套着数组;

完整代码

```
o index.html ×
                         JS main.js
      </head>
           <main id="zhangsan">
           </main>
           <footer></footer>
           <script>
           var keys ={
               0:{0:'q',1:'w',2:'e',3:'r',4:'t',5:'y',6:'u',7:'i',8:'o',9:'p',length:10
               1:['a','s','d','f','g','h','j','k','l'],
               2:['z','x','c','v','b','n','m'],
               length:3
           var hash = {
               q: 'qq.com',
               w:'weibo.com',
               e:'ele.me',
               r: 'renren.com',
               t: 'tianya.com',
               y:'youtobe.com',
               u:'uc.com',
               i:'iqiyi.com',
               o:'opera.com',
               p:undefined,
               a: 'acfun.tv',
               s:'sohu.com',
               z:'zhihu.com',
               m:'www.mcdonalds.com.cn'
           div1 = document.createElemnt('div')
           zhangsan.appendChild(div1);
 42
           </script>
      </html>
```

发现是一片空白;

下面要会用开发者工具:

可以发现这里是有问题的,

```
Elements
                       Console
                                >>
                                            8 1
                                                       X
 <!doctype html>
 <html lang="zh-Hans">
  ▼<head>
     <meta charset="UTF-8">
     <title>我的导航</title>
   </head>
  ▼<body>
     <header></header>
     <main id="zhangsan">
         </main>
     <footer></footer>
    ▶ <script>...</script>
   </body>
...</html> == $0
                                中。, 🙂 🎐 📟 🐁 👕 🔡
html
                                   DOM Breakpoints
 Styles
        Computed
                    Event Listeners
```

这里是字母拼写不正确! 应该是element!!!

可以看到明显加了一个 div ,在main里面; 首先吧key以一种合理的形式放到keys里面, 把所有的网址放入hash里面; 最后讲了如何在一个页面里面创造一个元素;
